** This test directly detects the DNA variant reportedly associated with Day Blindness/Retinal Degeneration (DB/RD)*

DNA Test Result: **CLEAR**

Explanation of DNA Test Result

Day Blindness/Retinal Degeneration is autosomal recessive. "Clear" dogs have two normal copies of DNA. Clear dogs will not develop Day Blindness/ Retinal Degeneration as a result of the tested mutation, although we cannot exclude the possibility they might develop Day Blindness/ Retinal Degeneration due to other mutations they might carry that are not detected by this test.

Result only applies to the sample supplied.
